Manual Part 2
Safety Advice

Attention

Please read these instructions and safety advice before you start to assemble your greenhouse or orangery. Is the packaging undamaged? Please check if everything is there before starting to assemble the structure. Defects or missing parts must be claimed to Dancover before assembling the product. Dancover cannot be held responsible for damages caused during assembly of the product like scratches, dents, or similar. Keep these instructions in a safe place for future reference.

Customer Service

Safety Advice

When establishing a greenhouse, it is your responsibility to comply with local rules and regulations and to ensure that the greenhouse is assembled correctly according to the enclosed manual. It is very important that you assemble all parts according to the instructions. Do not skip any parts or any steps.

Protection during assembly

Please take care when assembling the greenhouse as some parts may have sharp edges – both profiles and glass. Use work gloves as recommended in the manual – and preferably shoes and safety goggles. If using a ladder or power tools, be sure to follow the manufacturer's safety advice. Keep children away from the assembly site. Make sure that the weather is dry and not winding for safety reasons.

Do not lean against the greenhouse during construction. Do not place your greenhouse in an area with excessive wind. Do not attempt to assemble this greenhouse if you are tired, have taken drugs or alcohol. Be sure to be more than one person to do the job.

Attention!

Make sure that you place the greenhouse on a firm and plane surface preferably concrete, but flagstones, wood, or gravel can work, too. The base must be 100% in level and with the right angles – check by measuring the two diagonal dimensions. This is important whether you have a greenhouse with a pre-fabricated ground frame or you make your own base. Fasten the frame of the structure to prevent accidents in case of extreme weather.

Be aware of extreme weather conditions

Even though you have chosen a strong and sturdy SnowProof greenhouse built for areas with much snow, you still have to be aware of extreme weather situations with wet and heavy snow. Slightly depending on how high the snow load of your greenhouse is, you may have to remove the snow under certain circumstances. To be on the safe side, we recommend that you remove the snow from the greenhouse if the snow is wet and heavy and starts to build – otherwise the structure may collapse under the weight of too much heavy snow. Even though you have a strong greenhouse, when placing the greenhouse, pay attention to the risk of fallen branches, falling snow from roof tops and more that could create a potential hazard to the greenhouse.

We recommend that you use silicone to secure the window panes even if it does not say so in your manual. The silicone will seal the windows and make them stay in place.

Regular control and security

Please note that even though our greenhouses and orangeries are sturdy and durable structures, they are not permanent buildings as such so it is upon you to regularly check the structure to make sure that it is safe and in working order. A greenhouse is a sturdy but light construction so it is your responsibility to ensure that the greenhouse is safely secured and fastened to the base so the greenhouse does not cause damage to others in case of bad weather. In case of a storm, remove loose objects from the surrounding garden – like garden furniture, parasols, toys, trampoline, and more – as it can move and hit the greenhouse during the storm. During the winter you can secure the greenhouse by removing automatic window openers and in general securing the doors and windows so the wind cannot get hold.

When fastening the frame of the greenhouse, be sure not to hit any hidden cables or pipes in the ground when inserting the ground pegs, ground anchors, or similar.

Insurance

Please check whether a greenhouse is covered by your home contents insurance. Do not stay inside the greenhouse during extreme weather conditions. Make sure that doors and windows are securely closed during a storm.

Warranty information

Dancover warranty applies only to the normal use of the product, normal wear and tear excepted, in accordance with written use instructions or manual. If you need to clean your greenhouse at some point, only use a mild detergent and lukewarm or cold water – and a disinfectant before a new season. Do not use strong agents of any kind.
